This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. REVOLUTION IN QUARTZ CRUSHING.

DAVEY, PAXMAN & CO.,

ENGINEERS, COLCHESTER, ENGLAND,

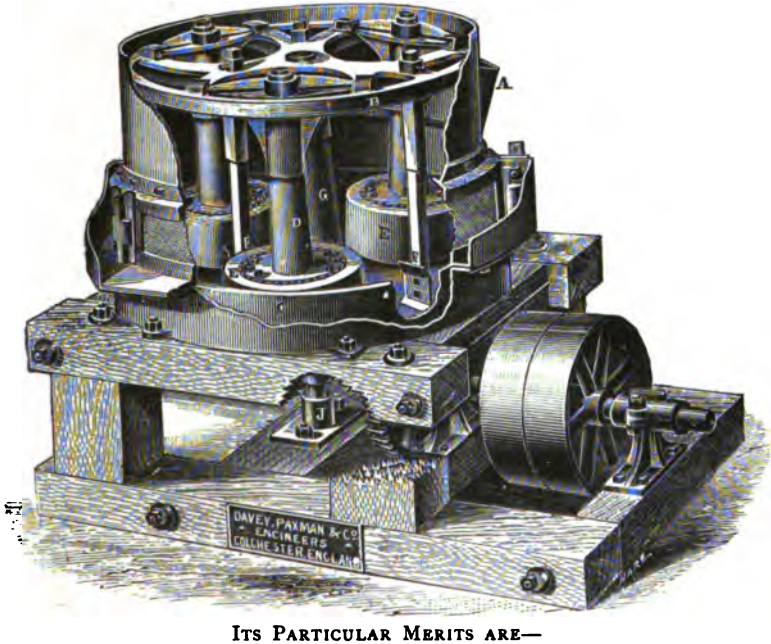
SOLE LICENSEES AND MANUFACTURERS FOR ENGLAND AND THE COLONIES OF

HUNTINGDON'S

CENTRIFUGAL ROLLER QUARTZ MILL,

FOR

FINE PULVERIZING IN CONCENTRATION.



ITS PARTICULAR MERITS ARE—

Economy in expense of plant.
Economy in cost of working.
Economy in saving gold.
Economy in transportation of machinery.
Economy in cost of erection of mill at mine.
Economy in time required to establish plant at mine (one day only being consumed).
Economy in management of machinery (its simplicity of construction obviates the need of mechanical skill).
Economy in power required (a saving of 50 per cent. being rendered).

We claim especial merit in that feature of this system by which we prevent all flowing of gold and quicksilver, and the consequent loss of gold that attends stamp milling.

MR. COULTAS DODSWORTH, Mining Engineer, of Haydon Bridge, writes on the 15th January, 1874:—"I have just returned from the Stonecroft and Greyside Mines, where I have seen your 'Patent Ore Dressing Machinery' at work, with which I must say I was highly pleased. It is decidedly the best machinery I have ever seen for the purpose, the results being as near perfection as possible, and I am quite sure its use in this case will be a very great saving to the Company. No large mining establishment should be without your Machinery, especially when labour is difficult to procure—a mere fraction of the hands being only required as against the old system, and the work altogether much better done, and a great saving of Ore effected. I have heard it said that your Machinery is better adapted for poor than for rich Ores, but from what I have seen to-day I am quite confident it will do for any kind of Ores. I beg not only to congratulate, but also to compliment you on the great success of your 'Patent Ore Dressing Machinery.' You may use this letter as you think proper."

TESTIMONIAL.

"Mr. George Green, of Aberystwyth, has supplied a large quantity of Complete Stamping and Amalgamating Machinery to me for Gold Mines in the United States of Colombia, now Republic of Colombia, and it has all proved of excellent description and very good workmanship.

"Names of Mines using the Machinery:—Organos Gold Quartz Mines; Silencio Gold Quartz Mines; Socorro Gold Quartz Mines; Colombian Hydraulic Gold Placier Mines; Oritâ Hydraulic Gold Placier Mines. TREATMENT OF SILVER, LEAD BLENDE, AND OTHER ORES.

Copy of a Letter from the Sentein Mining Company, South France.

"Metropolitan Buildings, 63, Queen Victoria Street, London, E.C.,
"25th May, 1881.

"DEAR SIR,

"In reply to yours asking for a testimonial as to the efficiency of your Patent Dressing Machinery as supplied to the Sentein Mines, I would in the first instance state that before your Machinery was erected, we had some doubt of being able to dress our Ores at all, owing to the very close combination of the Lead and Zinc, of which a very large proportion of the produce of our Mine is composed.

"I am, however, much pleased to say that after ample trial, your Machinery has completely removed the difficulty, and we are now dressing all our Ores to our entire satisfaction, and what you undertook to do has been fully realized; the labour cost has been greatly reduced, and all the Ores previously put aside as unworkable, have been cleared off, and a large percentage that was going to waste is saved.

"Yours truly,
"WILLIAM STANDING,
"Chairman.

PREFACE.

THE want of a Telegraphic Code for Mining purposes has been for some time felt by the Author in his professional practice; he also has reason to believe that it is a requirement universally admitted by persons interested in Mines Abroad and in the Colonies, by Mining Companies, and by inspecting Engineers. Not only is such a Code needed in order to reduce the expense of telegraphic communication within reasonable limits, but also to secure secrecy, where desired, for the messages transmitted.

Although other Codes already exist, and notably the well-known A B C Electric Telegraphic Code, their scope is too general to render them of much value for this particular purpose, especially as Mining involves the use of a very large number of technical expressions, which none of the books referred to contain.

The Author has therefore been induced to compile the present work, with the object of supplying this want to some extent.

The arrangement adopted is Alphabetical, that being undoubtedly the simplest and quickest for reference.

The First Part of the Code includes all such sentences as his experience has shown are likely to be required in connection with Mining.

PREFACE.

THE want of a Telegraphic Code for Mining purposes has been for some time felt by the Author in his professional practice; he also has reason to believe that it is a requirement universally admitted by persons interested in Mines Abroad and in the Colonies, by Mining Companies, and by inspecting Engineers. Not only is such a Code needed in order to reduce the expense of telegraphic communication within reasonable limits, but also to secure secrecy, where desired, for the messages transmitted.

Although other Codes already exist, and notably the well-known A B C Electric Telegraphic Code, their scope is too general to render them of much value for this particular purpose, especially as Mining involves the use of a very large number of technical expressions, which none of the books referred to contain.

The Author has therefore been induced to compile the present work, with the object of supplying this want to some extent.

The arrangement adopted is Alphabetical, that being undoubtedly the simplest and quickest for reference.

The First Part of the Code includes all such sentences as his experience has shown are likely to be required in connection with Mining.

Digitized by Google

In the Second Part, in which are coded Money Tables, Numbers, Names of Banks, and of Mines and Mining Companies, distinct classes of Code-words have been employed to denote the different coinages, etc., so that they can be immediately recognized, and no time need be lost in searching for them in the body of the volume. Thus:

For	The Code-Words used are names of
ENGLISH MONEY	Fruits, Flowers, and Plants.
FRENCH MONEY	Birds.
AMERICAN MONEY	Animals (other than Birds, Insects, and Fishes).
NUMBERS	Proper Names (Latin, Hebrew, etc.)
NAMES OF BANKS	Insects.
NAMES OF MINES AND MINING COMPANIES	Fishes.

In the Third Part, five hundred blank Code-words are given, as users of the Code may desire to insert special sentences relating to their own affairs. These words all begin with G, and are in alphabetical order from GLOBATED.

Absolute secrecy can be secured for any message, if by previous arrangement between the sender and the recipient, the Code-words are not used to express the sentences set opposite to them in the book, but others an agreed number of sentences above or below them.

Example.—Supposing Sender arranges with Recipient that the Code-words transmitted shall express the sentences *five* above them in numerical order, then the word "ADORING" (*see* p. 8) will not mean "*owing to the action of*," but "*not acting in good faith.*"

Although, as has been stated, the Work is specially designed for persons connected with Mining undertakings, it necessarily contains a great many sentences of general application, and may therefore be found of value in connection with other businesses.

It frequently happens that messages are mutilated and

Digitized by Google

rendered meaningless, owing to the letters of the Alphabet being represented by "dots" and "dashes," and confusion caused in consequence during transmission. A reference to the "Morse Alphabet" may sometimes enable the recipient of a message to see where the mistake has arisen, and to extract the correct meaning. This Alphabet is therefore prefixed to the Code.

The Author desires to add, in conclusion, that although he has done his best to make this first edition as complete as possible, the subject dealt with is too vast for him to think that it can be regarded as perfect. He ventures to hope, however, that it will form the foundation of a thoroughly complete and practical Code.

He will be greatly indebted to the Engineers and Managers of Mining Companies if they will kindly assist him in effecting the object he has in view, by pointing out any omissions, or making any suggestions that may occur to them.
